- English (intermediate)

Hard skills

- | | | |
|--------------|---------------|-------------------------------|
| - JavaScript | - Nest | - OOP principles and patterns |
| - TypeScript | - REST API | - Git |
| - Node | - PostgreSQL | |
| - Express | - Drizzle ORM | |

Soft skills

- | | |
|-------------------------|------------------------------|
| - Accurate | - Individually and in a team |
| - Hardworking | - Strong analytical thinking |
| - Quick learning skills | |

Summary

Backend Developer with hands-on experience building server-side applications through personal projects. I focus on creating reliable APIs, working with databases, and implementing clean backend architecture.

I have experience designing RESTful services, managing data persistence, and writing efficient server logic. I enjoy structuring code for maintainability and building backends that integrate smoothly with frontend applications.

I learn new technologies quickly and pay close attention to code quality, security, and performance. While my team experience comes from frontend development, I bring strong collaboration skills and I'm eager to apply them as I grow into backend roles through real-world challenges.

Project experience

User Authentication & Management System

https://github.com/yevhenii-sulim/user_authentication_management_system

Built a backend authentication system featuring user registration, login, and profile update functionality. Implemented middleware and guards for route protection, ensuring secure access control for unauthenticated users.

RSS News Aggregator

<https://github.com/yevhenii-sulim/news-api>

Built a backend service that fetches news from RSS feeds via CLI commands and stores them in a database. Implemented a REST API to serve news to the client, along with automated cleanup of outdated records. Profiled and optimized the application for performance.

Inkluvo Backend

<https://github.com/yevhenii-sulim/inkluvo-api>

Developed a backend API for a mobile accessibility map application that helps users find and evaluate accessible places. Implemented authentication, CRUD operations for places, comments, complaints, and accessibility parameters. Designed PostgreSQL database schemas using Drizzle ORM and built business logic for automatically calculating accessibility scores based on entrance, ramp, elevator, parking, restroom, and other accessibility features.

Education

Master of engineering

Kharkiv National University of Construction and Architecture, faculty of Sanitary Engineering, specialty - heat and gas supply and ventilation

2008 - 2013

Courses

UDEMY (nest)

Backend developer (2024)

IT School GoIT (express, react)

Fullstack developer (2023 - 2024)
